

Matthew Williams

Sprint Report 3:

Sprint 3 was chaotic to say the least. With varying degrees of in-person absences, it was a little tougher to coordinate between teammates. However, we did manage to get a lot done.

The main key completions were:

Account creation and authentication

Creation of Blackjack game

Creation of Dashboard

Creation of Horse Racing, Slots, and Roulette (yet to be integrated)

Product Backlog

...

I want to be able to play and bet in Poker.

Get games made

RD

SM

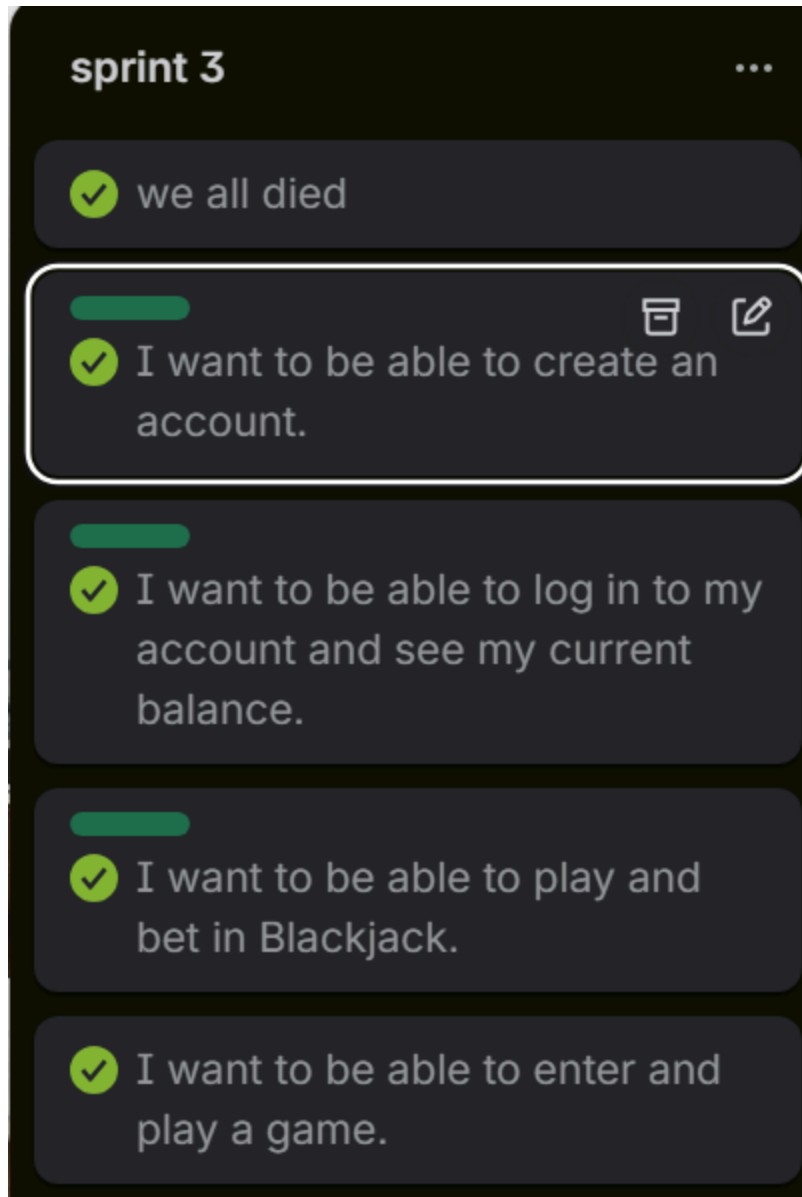

I want to be able to play and bet in Roulette Wheel.

I want to be able to play and bet in Horse Races.

+ Add a card

Blackjack was handled by Samuel with some assistance from me. Lucas worked on the login and authentication alongside Caleb. I created the dashboard and helped ensure pages connected properly and stayed in design. Reo created Horse Racing, Roulette, and Slots.

Major challenges included getting the authentication and login working as well as working to get Blackjack functioning properly. At the time of writing this, it is working but has yet to be committed to main.

In regards to our current pace, I think we're well set to finishing on time, albeit it might be a little close. Our current major challenge is version control, as we have a lot of different branches in GitHub and not all of them are up-to-date with the main branch. Due to this, we haven't been able to do much testing either. Our next priority should be getting everything sorted into one stable build so we have something to present at the project milestone presentation.
